

Stockton & Rossmore Fire Irons

The basic design of fire irons has not changed since the mid-17th Century, with the poker used to break up large lumps of coal and oxygenate logs. The original hand-forged method of manufacture has been employed in the traditional foundry production of both the Stockton and the Rossmore.

Dimensions

Stockton (left):

Heights 31in (80cm), Heights 30in (78cm), Heights 30in (78cm)

Rossmore (right):

Heights 26in (66cm), Heights 30in (78cm), Heights 30in (78cm)
